

Up to the hype with iPhone tests

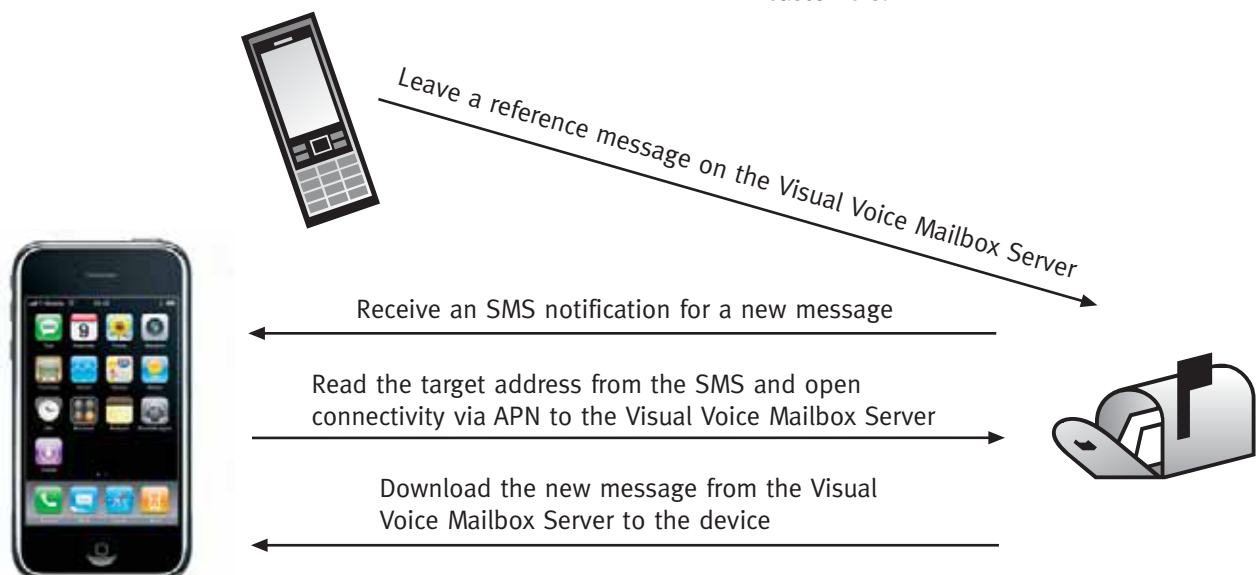

Available iPhone Visual Voicemail KPIs:

- ▶ duration
 - ▶ Failure Rates
- Subset*

For many users the iPhone and the 3G iPhone opened a new era of mobile phone interaction and services. The unique combination of multimedia contents, intuitive multi-touch display controls, accelerometer and much more created also a demand for new operator services dedicated only for a single group of subscribers.

Operators around the world specify this group of iPhone users as high-tech – high potential customers with a distinctive technology and quality demand. The unique services offered for this iPhone customer base like the Visual Voice Mail Box create additional quality process demands at each network operator.

The Keynote SIGOS SITE System offers dedicated iPhone tests to simply fit into all QoS test procedures performed via SITE without any additional effort. At the same time measurements and KPIs provide clear evidence of the service availability and performance focussed on this group of high-tech – high potential customers.
